Printing @ Geneseo

This document explains all of the different printing options offered at SUNY Geneseo.

Cloud printing

If you are not immediately near a printer, you may utilize one of Geneseo's Cloud Printing queues. Any type of document may be printed via Cloud Printing. The document will not print immediately; it must be released at one of the many Cloud Printing enabled Toshiba Multifunction Devices (MFDs) on campus. For list of MFD locations and more information, visit our Self Help document on Cloud Printing.

Direct Print

The most common method of printing for faculty and staff is to install the printer onto your laptop or desktop and print to it directly.

To install any campus printer onto your laptop or desktop, check out the following links:

- Adding a Network Printer for macOS
- Adding a Network Printer to Windows

Mobile Printing

Google Cloud Print is available for mobile device owners with their Geneseo account credentials. Using Cloud Print on your device will let you print to our cloud printing service. For more information, visit our Self Help document on Google Cloud Print.

Web Print

Web Print printing is also available for Geneseo's cloud printing service. Please note that only Microsoft Office documents and PDFs can be printed from the Web-print service. To use the Web Print service visit our Self Help document on PaperCut Web Print.
