Cloud printing

If you are not immediately near a printer, you may utilize one of Geneseo's Cloud Printing queues. Any type of document may be printed via Cloud Printing. The document will not print immediately; it must be released at one of the many Cloud Printing enabled Toshiba Multifunction Devices (MFDs) on campus. For list of MFD locations and more information, visit our Self Help document on Cloud Printing.

Mobility Printing

Mobility Print lets you print from macOS, Windows, Chromebooks, iPads, iPhones, and Android devices in a cinch. It's compatible with every printer brand, too – and setting it up is simple for even the most novice user.

Direct Print

The traditional method of printing for faculty and staff is to install the printer onto your laptop or desktop and print to it directly.

To install any campus printer onto your laptop or desktop, check out the following links:

- Adding a Network Printer for macOS
- Adding a Network Printer to Windows

Web Print

Web Print printing is also available for Geneseo's cloud printing service. Please note that only Microsoft Office documents and PDFs can be printed from the Web-print service. To use the Web Print service visit our Self Help document on PaperCut Web Print
