

Creating a Page

This page provides basic information on creating pages in the Geneseo Confluence wiki. For a complete overview, see the [Confluence User Guide](#).

There are two ways to create a new page. The first is to hit "Add Page" in the menu. The second is to link to a new page from an existing one.

If, while editing a page, you type

```
[my new page]
```

when you save the page you'll see **this:** [my new page](#).

The green cross symbol indicates that when you click the link, you'll be given the option of creating a new page.
